Core 1: Identify the Problem/Need and Obtain Approval

Company Description

MhysticFX Solutions is a financial technology consultancy specializing in tools, analytics, and training for retail and institutional traders in the foreign exchange (FOREX) market. The company provides innovative solutions that combine technology and financial expertise to help traders make smarter, faster, and more profitable decisions.

Mission Statement

Our mission is to empower traders worldwide by delivering cutting-edge information systems that simplify complex market data, automate routine tasks, and enhance decision-making through real-time insights.

Current Information System

At present, MhysticFX Solutions relies on:

- MetaTrader 5 platforms for executing trades
- Excel spreadsheets for client portfolio tracking
- Email and messaging apps for communication
- Manual reporting processes with limited integration

These systems are functional but fragmented, leading to inefficiencies and slower responses to market changes.

Core 2: Plan and Monitor the Project

System Vision Document

MhysticFX Solutions

Problem Description

MhysticFX Solutions currently faces significant challenges due to the fragmented nature of its information systems. Trade execution occurs on one platform, while client data and performance tracking are handled separately in spreadsheets. This lack of integration creates delays in reporting, increases the risk of human error, and makes it difficult to provide clients with timely updates. Additionally, the reliance on manual processes limits scalability. As the client base grows, the workload becomes unmanageable. Traders also lack advanced forecasting tools, meaning they often react to market changes rather than anticipate them. The absence of a centralized system reduces efficiency, weakens risk management, and hinders the company's ability to compete with larger firms that use automated, data-driven solutions.

It is recommended that MhysticFX Solutions implement a new integrated information system to resolve these issues and strengthen its competitive position in the FOREX industry.

System Capabilities

The new system should now be capable of:

- Centralized dashboard integrating live market feeds and client portfolios
- Automated trade performance reports and risk alerts
- Cloud-based storage for secure, global access
- AI-driven analytics for trend forecasting and decision support

Business Benefits

It is anticipated that the deployment of this new system will provide the following business benefits to MhysticFX Solutions:

- Faster, more accurate trade analysis
- Improved transparency and client satisfaction
- Reduced administrative workload through automation
- Scalable infrastructure to support future growth and expansion

Organization Chart

Information-Gathering Techniques

To design the new system, MhysticFX Solutions will use:

- Interviews with traders, analysts, and clients to identify pain points.
- Questionnaires to collect structured feedback on system requirements.
- Document reviews of trade logs, client reports, and communication records.
- Process observation to understand workflows and inefficiencies.
- Vendor research to compare available solutions and integration options.
- User feedback sessions to validate proposed features.

Core 3: Discover and Understand the Details of the Problem or Need

Interview Questions for Traders:

- 1) **How often do you execute trades daily or weekly?**
Reason: To understand trading frequency and system load.
- 2) **What tools do you use for market analysis?**
Reason: To identify integration needs with existing trading tools.
- 3) **What challenges do you face when generating reports?**
Reason: To uncover inefficiencies in data handling and reporting.
- 4) **How satisfied are you with the speed of trade execution?**
Reason: To evaluate system performance and responsiveness.
- 5) **Would automated risk alerts improve your workflow?**
Reason: To assess interest in AI-driven risk management features.
- 6) **How do you prefer to receive performance updates?**
Reason: To guide user interface and communication design.
- 7) **What additional forecasting features would you find valuable?**
Reason: To inform future system enhancements.
- 8) **How often do you experience delays in data updates?**
Reason: To identify system bottlenecks affecting efficiency.
- 9) **What type of training or support would help you use new systems effectively?**
Reason: To plan onboarding and user support strategies.
- 10) **What improvements would make your trading experience smoother?**
Reason: To gather direct feedback for system optimization.

Interview Questions for Analysts:

- 1) **How do you currently track market trends and performance metrics?**
Reason: To evaluate analytical tools and data sources.
- 2) **What difficulties do you encounter when compiling reports?**
Reason: To identify workflow challenges and data accuracy issues.
- 3) **How do you collaborate with traders and management teams?**
Reason: To assess communication and coordination processes.
- 4) **What features would make analysis faster or more accurate?**
Reason: To gather suggestions for system improvement.
- 5) **How do you handle incomplete or delayed data?**
Reason: To understand data reliability and contingency methods.
- 6) **What metrics do you consider most important for decision-making?**
Reason: To align system outputs with analytical priorities.
- 7) **How do you visualize data for reporting?**
Reason: To identify preferred formats and visualization tools.
- 8) **What would help you produce reports more efficiently?**
Reason: To improve productivity and reduce manual effort.
- 9) **How do you ensure accuracy when analyzing large datasets?**
Reason: To evaluate data validation practices.

10) What improvements would make your analysis process more effective?

Reason: To pinpoint areas for system enhancement.

Interview Questions for Clients:

1) How easy is it to access your portfolio information?

Reason: To measure system usability and accessibility.

2) What frustrates you most about the current system?

Reason: To identify pain points and user experience issues.

3) How often do you request manual updates or assistance?

Reason: To evaluate dependency on staff support.

4) Would mobile access improve your experience?

Reason: To assess demand for mobile integration.

5) Do you trust the security of the online system?

Reason: To understand client confidence in data protection.

6) What features would make the platform more convenient?

Reason: To gather ideas for usability improvements.

7) How satisfied are you with the accuracy of your reports?

Reason: To measure reliability and transparency.

8) Do you prefer online or in-person consultations?

Reason: To identify client communication preferences.

9) What would make you more confident in using MhysticFX Solutions?

Reason: To capture trust and satisfaction factors.

10) What improvements would make you recommend MhysticFX to others?

Reason: To understand how system upgrades can boost client loyalty.

Questionnaire for Traders:

- 1) How satisfied are you with the current trading system's speed and reliability?
- 2) How often do you experience delays or errors when executing trades?
- 3) Which trading tools or features do you use most frequently?
- 4) How useful would automated alerts be for risk management?
- 5) How confident are you in the accuracy of system-generated reports?
- 6) How easy is it to navigate the trading interface?
- 7) What additional features would improve your trading experience?
- 8) How satisfied are you with the support provided when issues occur?
- 9) How often do you access the system from mobile devices?
- 10) How likely are you to recommend MhysticFX's trading platform to others?

Questionnaire for Analysts:

- 1) How effective are the current tools for analyzing market data?
- 2) How often do you encounter incomplete or outdated information?
- 3) How satisfied are you with the speed of data processing?
- 4) How easy is it to generate reports using the current system?
- 5) How accurate do you find the system's analytics results?

- 6) How well does the system support collaboration with traders?
- 7) How useful are the visualizations provided for decision-making?
- 8) How frequently do you need to manually correct data errors?
- 9) How satisfied are you with the overall reliability of the system?
- 10) What improvements would make your analysis process more efficient?

Questionnaire for Clients:

- 1) How easy is it to access your portfolio and account details?
- 2) How satisfied are you with the accuracy of your transaction records?
- 3) How secure do you feel using the online system?
- 4) How convenient are the payment options available?
- 5) How often do you experience issues with login or navigation?
- 6) How useful are the reports and insights provided?
- 7) How satisfied are you with the response time when requesting support?
- 8) How likely are you to use mobile access for your account?
- 9) How confident are you in the system's data privacy measures?
- 10) What improvements would make your experience more enjoyable?

Documentation, Input & Output Reviews

- Review trade execution logs from MetaTrader 5.
- Analyze Excel portfolio spreadsheets for accuracy and consistency.
- Evaluate client communication records (emails, reports) for timeliness and completeness.

Process Observation & Documentation

- Observe how trades are executed and recorded.
- Document how client reports are generated manually.
- Track communication workflows between analysts and clients.

Vendor Solution Research

Potential vendors include:

- CRM systems with FOREX integration (e.g., Salesforce with financial plugins).
- AI-driven analytics platforms specialized in trading.
- Cloud-based portfolio management tools.

Active Comments & Suggestions from Users

- Traders request real-time forecasting tools to anticipate market shifts.
- Clients want automated, transparent reporting with mobile access.
- Analysts suggest reducing manual data entry to minimize errors.

Analysis – UML Models and FURPS Requirements

Use Case Diagram 1 – Trading and Reporting

This diagram shows how traders execute trades and generate reports, analysts analyze market trends, clients view portfolios, and administrators manage accounts.

Use Case Diagram 2 – Client Account Management

This diagram models client interactions with the system, focusing on account creation, updates, and support requests.

Fully Developed Use Case – Generate Automated Report

Use Case Name:	Generate Automated Report	
Scenario:	Analyst requests automated trade performance report.	
Triggering Event:	Analyst selects “Generate Report” option.	
Actors:	Analyst	
Stakeholders:	Traders, Clients, Management	
Preconditions:	Trade logs and client data must be available.	
Postconditions:	Report is generated, validated, and stored.	
Flow of Activities:	Actor	System
	1. Analyst requests report. 2. Analyst reviews and shares with client.	1. System retrieves trade logs and client portfolios. 2. System validates data accuracy. 3. System generates PDF/online dashboard.

Activity Diagram 1 – Generate Automated Report

Activity Diagram 2 – Execute Trade

System Sequence Diagram – View Portfolio

The Client requests portfolio information from the Forex Trading Platform. The system retrieves the portfolio data and returns the portfolio details to the Client. This sequence ensures that the user can successfully view their investment portfolio through the platform.

CRUD Verification Table

Data Entity / Domain Class	CRUD	Verified Use Case
Customer	Create	Manage Accounts (Create Customer Account)
	Read	View Portfolio / Account Dashboard
	Update	Manage Accounts (Update Customer Information)
	Delete	Manage Accounts (Delete/Close Customer Account)
Portfolio	Create	Create Portfolio for New Customer
	Read	View Portfolio / Balance
	Update	Execute Trade / Adjust Holdings
	Delete	Close Portfolio Account
Trade	Create	Execute Trade (Buy/Sell Orders)
	Read	Analyze Market / Trade History
	Update	Modify Pending Trade
	Delete	Cancel Trade
Report	Create	Generate Report (Performance, Compliance)
	Read	Access Reports
	Update	Produce Reports (Update Metrics)
	Delete	Remove Archived Report

CRUD Matrix Showing Use Cases and Corresponding Entities

Use Case	Customer	Portfolio	Trade	Report
Manage Accounts	CUD	C		
View Portfolio	R	R	R	
Execute Trade	R	U	C	
Analyze Market		R	R	
Generate Report	R	R	R	C
Produce Reports	R	R	R	U
Access Reports				R
Receive Risk Alerts	R	R	R	R

FURPS Classification of System Requirements for MhysticFX Trading Platform

Requirement Category	FURPS+ Subcategory	Requirements for MhysticFX Trading Platform
Functional Requirements	Functions	Business rules and processes for account creation, trade execution, and report generation
Nonfunctional Requirements	Usability	User interface design, ease of use, and intuitive navigation for trade and portfolio management
	Reliability	Failure recovery, uptime consistency, and risk alert accuracy
	Performance	Response time for trade confirmation, throughput for report generation
	Security	Access controls, encryption of customer data, and secure authentication

Core 4: Design the System Components that Solve the Problem

Development Strategy: Build vs Buy

Building a custom system would give MhysticFX Solutions complete control over the design and functionality of its trading and reporting platform. This approach allows the company to tailor every feature to its specific needs, ensuring that workflows, forecasting tools, and reporting structures align perfectly with trader and client expectations. However, building requires significant investment in time, skilled developers, and ongoing maintenance. It also introduces risks such as project delays, higher upfront costs, and the need for continuous updates to keep pace with evolving market technologies.

Buying vendor software, on the other hand, offers a faster and more reliable path to implementation. Established platforms already provide proven functionality, vendor warranties, and technical support. They are designed to integrate with web applications and database servers, making it easier to connect trading, portfolio management, and reporting functions. While licensing fees and limited customization are drawbacks, the benefits of immediate deployment, scalability, and vendor-backed security controls outweigh these limitations.

After evaluating both strategies, MhysticFX Solutions will pursue the buy option. This decision ensures rapid deployment of a secure, scalable system that meets current business needs while reducing risk and cost. Vendor support and warranties provide confidence in system reliability, and integration with web-based applications ensures that traders, analysts, and clients can access accurate, real-time information. By choosing to buy, MhysticFX positions itself to compete effectively in the FOREX industry without the delays and risks of custom development.

Table 1. Vendor Comparison for MhysticFX Trading System

Categories	MetaTrader 5	TradingView	Salesforce FSC
User Rating	4.3	4.7	4.5
Ease-of-Use	4	4.8	4.2
Value for Money	Medium	High	Low
Customer Support	4.5	4.6	4.7
Functionality	4.6	4.8	4.4
Pricing Range	High	Medium	High
Cloud Version	Yes	Yes	Yes
Mac Version	Yes	Yes	Yes
Windows Version	Yes	Yes	Yes
On-Premises Version	No	No	No
Reporting	Automated trade reports	Customizable dashboards	Executive financial reports
Payments	Broker & card integration	Broker payments	Client billing
POS Hardware	Yes	No	No
Risk Alerts	AI-driven volatility alerts	Custom indicator alerts	Compliance alerts
Portfolio Management	Yes	Yes	Yes
Market Forecasting Tools	AI plugins & forecasting	Predictive indicators	CRM analytics
Withdrawal Method	Bank, card, e-wallet	Broker dependent (card/PayPal/crypto)	Refunds only via CRM billing

The table highlights that MetaTrader 5 and TradingView best align with MhysticFX’s trading needs. MetaTrader 5 offers advanced reporting, broker integration, and secure withdrawal methods, while TradingView provides affordability, ease-of-use, and strong charting tools. Salesforce FSC is strong in CRM but less suited for direct trading workflows. MhysticFX should therefore prioritize MetaTrader 5 or TradingView depending on budget and scalability.

Features, Warranties & Help Support

MetaTrader 5 provides several different features, such as:

- 1) **Automated Reporting:** Generates detailed trade histories and portfolio summaries, helping traders track performance and identify profitable setups.
- 2) **Broker Integration:** Connects directly with brokers to manage deposits, payments, and withdrawals through secure gateways such as bank transfers, cards, and e-wallets.
- 3) **Risk Alerts:** Uses AI-driven volatility alerts to notify traders of sudden market changes, improving risk management and decision-making.
- 4) **Forecasting Tools:** Offers built-in forecasting plugins and predictive analytics that assist in identifying trends and potential trade opportunities.
- 5) **Cross-Platform Access:** Supports Windows, Mac, and cloud versions, allowing traders to access accounts and reports from anywhere with real-time synchronization.
- 6) **Vendor Support & Warranty:** Includes 24/7 institutional support via chat and ticket systems, plus vendor warranties covering licensing, updates, and system reliability.

Sales Report: MetaTrader 5 provides customizable trade and performance reports that help MhysticFX analyze trading volume, profit margins, and client activity. Reports can be generated for specific time frames and exported for auditing or forecasting purposes.

Payment: The platform integrates with broker systems for secure payment processing. Traders can fund accounts or withdraw profits through bank transfers, cards, or e-wallets, ensuring smooth and transparent transactions.

POS Hardware: Supports card readers and terminals for broker-linked transactions, enabling secure deposits and withdrawals directly through integrated payment devices.

Technical Requirements: MetaTrader 5 operates efficiently on Windows and MacOS with cloud access. A stable internet connection is required for real-time data synchronization. Recommended system specs include at least 8 GB RAM and a modern processor for optimal performance.

Warranties & Help: Vendor warranties cover licensing and updates, and institutional support is available 24 hours a day, 7 days a week through live chat, support tickets, and a knowledge base.

Website GUI Interface

MetaTrader 5 provides an intuitive and professional interface for traders at MhysticFX. The platform's design allows users to monitor live market data, execute trades, and analyze performance efficiently.

Account Registration

Open an Account ? X

Opening a real account
A real account is required for live trading on financial markets

First name: John

Second name: Smith

Middle name: Murray

Date of birth: 01.01.2000 Male

Language: English

Email: john@smith.com

Mobile Phone: +1 (United States) 2233445566

Country: United States

Personal details are used for opening a trade account and are not passed to any third parties.
The information is handled securely and confidentially.

< Back Next > Cancel

Clients create accounts in MetaTrader 5 by entering personal details such as name, date of birth, email, and phone number, then selecting account type, deposit amount, and leverage. Once registered, portfolios are automatically generated and linked to broker accounts, allowing users to add assets, monitor performance, and manage trades. Account settings provide secure options to update information and configure preferences, while automated reporting and forecasting tools summarize profit/loss and highlight trading trends

Trading Dashboard

The main dashboard displays real-time candlestick charts, bid/ask prices, and market watch lists for multiple currency pairs. Traders can view price movements, apply technical indicators, and manage open positions directly from the chart window.

Order Execution Window

The order panel enables traders to place buy or sell orders instantly, set stop-loss and take-profit levels, and choose between market or limit orders. This ensures precise control over trade entries and exits.

Portfolio and Account Summary

The account summary section displays balance, equity, margin, and profit/loss for all trades. It helps traders track performance, review transaction history, and generate reports for analysis and forecasting.

Security & Integrity Control

MetaTrader 5 ensures the security and integrity of MhysticFX's trading operations by combining broker-level safeguards with platform-wide encryption and authentication.

Encryption & Backup: All trading data is transmitted using SSL encryption to protect against interception. Brokers connected through MetaTrader 5 maintain secure servers with continuous backup of trade history and account information. This ensures that sensitive financial data remains protected and recoverable.

Access Control & Authentication: The platform supports two-factor authentication and secure login credentials, allowing only authorized users to access MhysticFX accounts. Role-based permissions can be configured to separate trader access from administrative functions, reducing the risk of unauthorized changes.

Fraud Prevention & Monitoring: MetaTrader 5 integrates with broker systems that provide real-time monitoring of suspicious activity, including unusual withdrawal requests or abnormal trading patterns. Alerts are generated to prevent fraud and ensure compliance with financial regulations.

Audit & Compliance: Annual security audits and broker compliance checks are performed to align with international financial standards. This includes adherence to KYC (Know Your Customer) and AML (Anti-Money Laundering) requirements, ensuring MhysticFX operates within regulatory frameworks.

By leveraging MetaTrader 5's built-in security protocols and broker-level protections, MhysticFX can securely manage client trades and financial data without the overhead of developing separate infrastructure.

Core 5: Build, Test, and Integrate System Components

MhysticFX Solutions will adopt a multi-layered testing approach to ensure the reliability, security, and usability of the trading platform before deployment. The process begins with unit testing, where individual modules such as trade execution, reporting, and portfolio management are verified to function correctly. Once these components are validated, integration testing will confirm that MetaTrader 5 communicates seamlessly with broker systems, payment gateways, and reporting dashboards.

Following integration, system testing will be conducted to validate that the platform meets all functional and non-functional requirements, including usability, reliability, performance, and security. To ensure the system aligns with business needs, user acceptance testing will involve traders, analysts, and clients executing real scenarios to confirm usability and accuracy.

Security is a critical priority, so security testing will verify encryption, authentication, fraud detection, and compliance with KYC/AML standards. Finally, performance testing will stress the system under high trading volumes to ensure stability and responsiveness. Together, these layers of testing provide confidence that the platform is robust, secure, and ready for deployment.

Hardware & Network Specifications

MhysticFX Solutions selected reliable, high-performance hardware to support trading operations and data analysis. Each component was chosen for speed, durability, and compatibility with MetaTrader 5.

Dell OptiPlex 7020 SFF Business Desktop Computer, 14th Gen Intel 14-Core i5-14500 (Beat i7-13700), 16GB DDR5 RAM, 512GB PCIe SSD, W...

512 GB

RAM
16 GB

Processor Speed
2.60 GHz

Item	Qty	Specifications	Price (USD)	Total (USD)
Dell OptiPlex Desktops	2	Intel i5, 16 GB RAM, 512 GB SSD	\$599	\$1,198
ASUS RT-AX86U Router	1	Wi-Fi 6, dual-band 2.5 G ports	\$255.25	\$255.25
TP-Link TL-SG108 Switch	1	8-port Gigabit	\$100	\$100
Cat6 Ethernet Cable	1	50 ft, 1 Gbps	\$89	\$89
MetaTrader 5 License	1	Institutional package	\$2,500	\$2,500
Consultation Fees	1	Vendor setup and training	\$4,500	\$4,500
Maintenance Contract	1	Annual support and updates	\$2,000	\$2,000
Total Cost				\$10,642.25

The network infrastructure ensures stable connectivity and fast data transfer between trading terminals and broker servers. The ASUS RT-AX86U router provides Wi-Fi 6 performance with dual-band support, while the TP-Link TL-SG108 switch distributes traffic efficiently across wired connections. Cat6 Ethernet cables guarantee low latency and high-speed communication for real-time trading.

Item	Qty	Specifications	Price (USD)	Total (USD)
ASUS RT-AX86U Router	1	Wi-Fi 6, dual-band, 2.5G ports	\$255.25	\$255.25
TP-Link TL-SG108 Switch	1	8-port Gigabit	\$100	\$100
Cat6 Ethernet Cable	1	50 ft, 1 Gbps	\$89	\$89
Total Cost				\$444.25

To protect sensitive trading data, MhysticFX Solutions will implement the Fortinet FortiGate 40F firewall. It offers AI-driven threat prevention, intrusion detection, and secure VPN connectivity. The hardware costs approximately \$450, with an annual subscription of \$396 for updates and support. This ensures compliance with financial security standards and continuous protection against cyber threats.

Reliable internet access is essential for uninterrupted trading, especially when dealing with real-time FOREX data and secure transactions. MhysticFX Solutions evaluated the two main **Internet Service Providers** in Saint Lucia and Antigua & Barbuda:

- **Flow** which offers fiber-optic connectivity with gigabit speeds, providing the fastest option in both countries. It is known for wide coverage, stable connections, and strong performance. However, Flow's premium packages often come at a higher cost, which can increase long-term operating expenses.
- **Digicel** which provides fiber internet with speeds up to 350 Mbps in Saint Lucia and Antigua & Barbuda. While slower than Flow's gigabit service, Digicel offers competitive pricing, flexible packages, and strong customer support. Its fiber service is reliable enough for continuous trading operations, and the cost savings make it attractive for a growing company.

MhysticFX Solutions will go with Digicel Fiber Internet in both Saint Lucia and Antigua & Barbuda. Although Flow offers higher speeds, Digicel provides a balance of affordability, reliability, and sufficient bandwidth for the company's trading and reporting needs. This choice reduces operating costs while still ensuring stable connectivity, supporting the ROI goals of the project and enabling expansion across both territories.

Network Diagram

The diagram illustrates MhysticFX Solutions' secure trading platform network architecture. Internet connectivity is provided by Digicel Fiber Internet, which links to an ISP Modem and passes through a Fortinet FortiGate 40F Firewall for threat protection and traffic control. The firewall connects to Switch 1 (Public Network), hosting the Web / Application Server that manages trading operations and reporting. Internal traffic flows to Switch 2 (Internal Network), which supports the Database Server (Primary) for data storage and the Client Dashboard Server for analytics and reporting. Trading PCs (Workstations) and a Wi-Fi Access Point provide secure user access, while a Storage Array handles backups and disaster recovery. This layered design ensures reliability, data integrity, and efficient communication between public and internal systems.

Return on Investments

The financial outlook begins with an upfront investment of \$10,642.25 in Year 0. Subsequent years add maintenance costs while benefits steadily increase, illustrating how MhysticFX moves from initial expenditure toward breakeven and eventual profitability.

Year	Costs (USD)	Cumulative Costs (USD)	Benefits (USD)	Cumulative Benefits (USD)
Year 0	\$10,642	\$0	\$0	\$0
Year 1	\$2,000	\$12,642	\$3,500	\$3,500
Year 2	\$2,000	\$14,642	\$6,000	\$9,500
Year 3	\$2,000	\$16,642	\$8,000	\$17,500
Year 4	\$2,000	\$18,642	\$10,000	\$27,500
Year 5	\$2,000	\$20,642	\$12,000	\$39,500

Over five years, cumulative benefits grew to \$39,500 compared to total expenses of \$20,642. The resulting net profit of \$18,858 produces an ROI of about 91%, confirming the project's financial viability.

Total Expenses	\$20,642 USD
Total Profit	\$39,500 USD
Net Profit	\$18,858 USD
ROI	91%

Core 6: Complete System Tests and Deploy the Solution

MhysticFX Solutions will transition its trading platform from the testing environment into live operation using a phased deployment strategy. This approach reduces risk by introducing the system in stages, beginning with the trading subsystem and later expanding to reporting and analytics. Deployment activities will include hardware installation, firewall configuration, ISP activation, and system testing to ensure stability. During the initial rollout, parallel monitoring will be conducted to detect and resolve issues quickly, minimizing disruption to trading operations. This structured plan ensures a smooth transition while maintaining system reliability and user confidence.

Phase	Activities	Risk Control	Timeline
1	Hardware setup, firewall configuration	Parallel monitoring	Week 1
2	ISP activation, system integration	Vendor support onsite	Week 2
3	User training, pilot rollout	Feedback collection	Week 3
4	Full deployment, reporting subsystem	Post-implementation evaluation	Week 4

Training is a critical component of system implementation, as it equips users and operators with the skills needed to effectively use and maintain the platform.

MhysticFX Solutions will conduct a three-day training program. The first two days will focus on traders and analysts, covering platform navigation, trade execution, and reporting dashboards. The third day will be dedicated to IT staff and administrators, emphasizing firewall management, backups, and troubleshooting procedures. Training will be delivered in a hybrid format, combining onsite sessions with recorded webinars and manuals to accommodate varying schedules. The estimated cost of training is \$1,200, which includes vendor consultation and materials. Effectiveness will be measured through post-training quizzes and feedback forms to confirm that participants are adequately prepared.

Day	Location	Audience	Topics
1	Onsite + webinar	Traders & Analysts	Platform navigation, trade execution
2	Onsite + webinar	Traders & Analysts	Reporting dashboards, analytics
3	Onsite + manuals	IT Staff & Admins	Firewall management, backups, troubleshooting

After deployment, MhysticFX Solutions will provide users with clear and accessible support resources to ensure confidence in operating the system. These resources include user manuals, quick-start guides, video tutorials, and webinars. A dedicated helpdesk will be available via email and phone, while an online FAQ will provide self-service assistance. Vendor support contracts and firewall subscription renewals will maintain technical reliability. This concise support framework focuses on helping users resolve issues quickly and continue working productively.

Post-Implementation Evaluation

To measure the success of the deployment, MhysticFX Solutions will conduct a post-implementation evaluation two weeks after rollout. Users will complete structured interview and survey forms that assess ease of use, functionality, training effectiveness, support responsiveness, and overall satisfaction. Metrics will include ratings on usability, training clarity, and support quality, as well as open-ended feedback on workflow improvements. Results will be analyzed to identify strengths and areas for improvement, and a summary report will be presented to management. This evaluation ensures that the system meets operational and business objectives while providing a foundation for continuous improvement.

Metric	Description	Measurement Method	Target Outcome
Ease of Use	Measures how intuitive the trading platform is for daily tasks	User survey (1–10 scale)	≥ 8 average rating
Training Effectiveness	Evaluates how well training prepared users to operate the system	Post-training quiz + feedback form	$\geq 80\%$ pass rate
Support Responsiveness	Assesses quality and timeliness of help-desk and tutorials	User survey + support logs	$\geq 90\%$ issues resolved within 24 hrs

System support does not end with deployment. MhysticFX Solutions will maintain reliability and adapt to user feedback through ongoing improvement activities. Quarterly updates and performance audits will be scheduled to ensure the system continues to meet evolving business needs. Version control will be implemented to track changes and manage multiple releases, while documentation will be updated regularly to reflect enhancements. By maintaining a cycle of monitoring, evaluation, and improvement, MhysticFX Solutions ensures that its trading platform remains robust, secure, and aligned with organizational goals.
